PROFESSIONAL PROFILE

Full Stack TypeScript Developer (Next.js / Node.js) & Biomedical Engineer. Specialized in designing scalable APIs, Agentic Workflows, and integral systems with an Applied AI approach. Focused on robust architecture, RBAC/JWT security, and 100% test coverage. My hybrid profile adds technical value at the intersection of HealthTech, AI integration, and development cycle optimization.

TECHNICAL SKILLS

- **Applied AI & Automation:** LLMs, Model Context Protocol (MCP), n8n, Prompt Engineering, Python (Scripts).
- **Frontend:** Next.js 15, React 19, TypeScript, Tailwind CSS, Radix UI, TanStack Query, Zod, React Hook Form, Framer Motion, Lucide React, Shadcn/ui.
- **Backend & Databases:** Node.js, Express, TypeScript, Sequelize ORM, MySQL, MongoDB, PostgreSQL, JWT, Passport, Multer, REST APIs.
- **Testing & QA:** Jest, Supertest, React Testing Library, Postman, Vitest.
- **Tools & Infrastructure:** Git/GitHub, Vite, Cloudinary, Vercel, Render, Husky, ESLint, Prettier, Linux/Bash.
- **Domain Expertise:** Clinical Engineering, PACS Systems, Medical Data Traceability, Healthcare Equipment Safety Standards.

FEATURED PROJECTS

MeDevice - Biomedical Equipment Management System (In Development) | *Full Stack Developer (January 2024 - Present)*

Spearheaded the development of a comprehensive hospital management platform using Next.js 15 and React 19, integrating TanStack Query for seamless server-client state synchronization.

Architected and deployed a robust backend ecosystem with Node.js and TypeScript, implementing a 3-layer architecture and patterns such as Singleton and Adapter.

Achieved 100% test coverage across 65+ critical endpoints using Jest and Supertest, ensuring medical data integrity and system reliability.

Implemented an advanced Role-Based Access Control (RBAC) system and change auditing to guarantee full traceability and compliance with healthcare security standards.

AI & IoT Orchestration Server (Personal Lab) Applied AI Engineer (Personal Project)

- Deployed and orchestrated local LLM agents (OpenClaw, Hermes) on a dedicated Ubuntu server.
- Implemented Model Context Protocol (MCP) to connect AI models with external tools and automated agentic workflows using n8n.
- Integrated Android physical sensors and ESP8266 microcontrollers via SSH (Termux) to feed real-world data into AI-driven Telegram notifications.

Charada Rental - Audiovisual Prop Rental Platform | Full Stack Developer (2023)

Developed a high-performance Single Page Application (SPA) using React, TypeScript, and Tailwind CSS, significantly improving initial Time to Interactive (TTI).

Optimized multimedia asset management with Cloudinary, implementing dynamic transformations and CDN delivery to enhance mobile performance.

Built a Node.js contact microservice integrated with Nodemailer, processing rental requests with strict data validation.

WORK EXPERIENCE

Angel C. Padilla Hospital

Full Stack Developer & Clinical Engineer (2021-2024)

Designed and implemented an internal web-based maintenance management system using React, Ant Design, Tailwind, Node.js, and Express, digitizing previously manual critical workflows.

Managed medical imaging infrastructures (PACS), guaranteeing 99.9% uptime for diagnostic data in high pressure clinical environments.

Ensured data interoperability by designing secure REST APIs with JWT authentication, centralizing the hospital's medical equipment inventory.

Ministry of Public Health (SiProSa)

Clinical Engineering Resident (2017-2020)

Executed preventive and corrective maintenance plans for life-support equipment, applying risk analysis and international quality standards.

Coordinated the adoption of new medical technologies, serving as the technical bridge between vendors

and clinical staff.

EDUCATION

- **Full Stack Web Developer** - Coderhouse (2022)
- **Clinical Engineering Specialist** - SiProSa, Tucumán (2020)
- **Biomedical Engineer** - Universidad Nacional de Tucuman (2016)

LANGUAGES

- **Spanish:** Native
- **English:** Professional Working Proficiency
