

Sebastián Taboada

Frontend / Full Stack Developer & Biomedical Engineer

San Miguel de Tucumán, Argentina (100% Remote - UTC-3) • contacto@sebastaboada.com.ar • +54 9 381 663-6350 • linkedin.com/in/sebastaboada • github.com/Coriannnder • sebastaboada.com.ar

PROFESSIONAL SUMMARY

Biomedical Engineer and Frontend / Full-Stack Developer with 4+ years of software experience, specializing in TypeScript, React, and API-driven Single-Page Applications (SPAs). Experienced in building scalable, modular web interfaces, robust state management (TanStack Query, Radix UI), and strict HTTP data integration. Strong track record in code quality through comprehensive testing (Jest, React Testing Library), constructive code reviews, and AI-assisted workflows. Passionate about open-source, humanitarian, and data-driven impact.

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript (ES6+), React 19, Next.js 15, SPAs, TanStack Query, Radix UI, React Hook Form, Tailwind CSS, Framer Motion, Vite, i18next, State Management

Testing & Quality: Jest, Supertest, React Testing Library, SonarQube, Husky & lint-staged, Code Reviews, Spec-Driven (Zod, OpenAPI)

DevOps & Tools: Git/GitHub, GitHub Actions, GitHub Webhooks (HMAC), Docker, Docker Compose, Linux/Ubuntu Server, Tailscale (Zero-Trust SSH), Vercel, MCP

Backend & Databases: Node.js, Express.js, Socket.io (WebSockets), RESTful APIs, MySQL, MongoDB, Sequelize ORM

WORK EXPERIENCE & KEY PROJECTS

Full Stack Developer & Lead Architect 2024 - Present

MeDevice | [Next.js 15](#), [React 19](#), [TypeScript](#), [Node.js](#), [Express](#), [MySQL](#), [Sequelize](#)

- Architected and developed modular full-stack features using Next.js 15, React 19, TypeScript, and Express, implementing clean 3-tier architecture.
- Built accessible, high-performance SPAs with Radix UI, TanStack Query, React Hook Form, and real-time WebSocket events (Socket.io).
- Established automated testing pipelines and quality gates using Jest, Supertest, React Testing Library, SonarQube, and Husky pre-commit hooks.
- Integrated AI agents and MCP servers for automated equipment inventory querying and maintenance traceability.

Frontend & Healthcare Data Engineer (Open Source Contributor) 2026 - Present

GREY-BOX / Project Codex | [React 19](#), [Vite](#), [TypeScript](#), [i18next](#), [FastAPI \(Python\)](#), [Neo4j \(Graph DB\)](#), [Docker](#)

- Built user interfaces with React 19 and Vite featuring multi-language support (i18next) for clinical translation exploration.
- Integrated and consumed backend services built with FastAPI and graph ontology data from Neo4j.
- Navigated and refactored existing/legacy codebases, modernizing components to TypeScript and contemporary best practices while maintaining backward compatibility.
- Collaborated in a distributed international team following agile practices, active code reviews, and Git workflows.

DevOps & AI Automation Engineer 2026 - Present

Linux Server Infrastructure & Developer Automation | [Ubuntu Server \(24.04 LTS\)](#), [Docker Compose](#), [GitHub Webhooks \(HMAC SHA-256\)](#), [GitHub Actions](#), [Node.js \(ESM\)](#), [OpenRouter API](#), [Tailscale \(Zero-Trust SSH\)](#)

- Developed MEDEVICE Reviewer using native Node.js (ESM) and HMAC SHA-256 security to audit GitHub PRs in real time via OpenRouter API and LLMs.
- Implemented automated CI/CD pipelines with GitHub Actions and containerized environments using Docker and Docker Compose on Ubuntu Server.
- Configured secure self-hosted infrastructure and Zero-Trust mesh networking (Tailscale SSH) for background services and remote development servers.

Clinical Systems & Internal Tools Developer 2021 - 2024

Hospital Padilla / SiProSa | [Web Dashboards](#), [PACS / RIS](#), [DICOM](#), [Gestión de Datos Clínicos](#)

- Developed internal web dashboards for maintenance tracking, inventory digitization, and work-order management.
- Maintained data integrity and interoperability across hospital clinical systems and imaging networks.

- Reduced critical equipment downtime through technical protocolization and digitized workflows.

EDUCATION & LANGUAGES

Biomedical Engineering Degree — Universidad Nacional de Tucumán (UNT) (Graduated)

Clinical Engineering & Healthcare Systems Specialization — UNT / SiProSa (Completed)

Full Stack Web Development Certification — Coderhouse (Certified)

Languages: Spanish (Native) • English (B1/B2 Professional / Conversational)
